Summary

I am a proficient software engineer and cloud engineer with experience in building and maintaining full-stack software applications as well as managing cloud infrastructure using providers like AWS and Azure.

Experience

Software Engineer Dimenso Technologies Inc October 2025 – Present

- I redesigned their AWS infrastructure to help comply with the SOC 2 security framework.
- I managed and performed reviews for each employee's level of access to Dimenso resources.
- I implemented user authentication for Dimenso users.
- **Used:** AWS Elastic Beanstalk, Python, AWS RDS, AWS Backup, FastAPI

Cloud Engineer WeClub June 2026 – August 2026

- Migrated an API service and database hosted on Kubernetes cluster from Azure to AWS.
- Rewrote parts of the API's codebase that relied on Azure-specific services to use AWS services.
- **Used:** MySQL, MongoDB, Kubernetes, AWS EKS, AWS CloudFront, AWS S3, Azure

Full Stack Developer & Cofounder AtoB Mobility Inc March 2023 – September 2025

- Developed prototype web application and mobile application that allows users to ride-share with drivers.
- Wrote API server hosted on AWS with NodeJS that both front-end applications communicate with for login, searching for car rides, processing payments, etc
- **Used:** MySQL, NodeJS, Javascript, Stripe API, Mapbox API, Flutter, AWS EC2 and RDS

Software Projects

- **Purdue Northwest Additive Manufacturing Club Website**
 - Helped create a web application for Purdue Northwest's Additive Manufacturing Club that allows customers to request for parts to be printed on 3D printers.
 - **Used:** Typescript, NextJS, React, NodeJS, PostgreSQL

Education

Hammond, IN Purdue University Northwest Aug 2020 – May 2024

- **Major:** Computer Science B.S.E
- **Minor:** Computer Engineering
- **Relevant Coursework:** Database Systems, Software Engineering, Networking
